

Version 7.00 Software

Unique features for voice & data

By merging the cutting-edge network systems with the original terminal equipment, NEC Infrontia offers system solutions to respond closely to the ever-diversifying market needs. As change accelerates, and what is imagined becomes reality, you need reassurance that what is new today is not redundant tomorrow. NEC Infrontia has a strong desire to see Aspire advance its competitive edge and will do so with the Version 7.00 Software, delivering big company features to small and expanding businesses. Unique features for both voice and data provide both operational and cost benefits for your company.

Buying a new telephone system is now more complex than ever, and for most businesses, your phone is your lifeline. If your telephone system fails, how much business could you lose? There are many extra features and enhancements on Version 7.00 that ensure that you get the best from your staff and you are new telephone system.

The Aspires 7th enhancement gives the user the numerous features and benefits:

Hot Keypad

The Hot Keypad feature lets you make an internal and an external call without even having to pick up the handset or press the speaker button.

ACD Queue

A caller in the ACD queue will now be able to dial a telephone number, outside of the queue.

Please hold on, all lines are busy, your call will be answered when a line becomes free. If you want to exit from ACD queuing, please dial '0'.

Intra-Mail ACD Message

The Aspire Intra- Mail has an Announcement Mail Box, which can be recorded by the administrator. From the 7th enhancement, the ACD Queue Message will be allowed to select Intra-Mail Announcement Resource.

Flexible Transfer

The flexible transfer feature will provide software loop back. No more hardware and no more slot spaces are required when the user wants to use the loop back feature. Making the Aspire a complete solution that is efficient, flexible and cost effective.

Mobile Extension

In today's world people are increasingly 'on the move' and those who are not mobile will lose their competition advantage

The Mobile Extension feature allows the user to simulate an internal extension on to a mobile phone and allows the control, hold and transfer operation normally only associated with a landline.

Mobile extension combines mobile access with the services, features and flexibility of an NEC business telephone.

A mobile extension behaves as an internal port of the Aspire System, but linked to an external mobile phone and provides many benefits for your business.

Other new features include:

- SIP Station Enhancement – Peer-to-Peer
- Call Park Searching
- Edit Caller ID & Redial
- Call Restriction between Department Groups
- Toll Restriction Class setting based on trunk line
- Hotel/Motel PMS Support
- PRG90-33 for China & Chile
- Fractional T1/PRI Port Assignment

Such unique features for both voice and data provide both operational and cost benefits for your company.

All of which provides better communication and better customer service for you and your business.
