

Intramail

Powerful Integration

Your business will get voicemail, automated attendant and a host of other useful features with the NEC Intramail.

Intramail is a powerful integrated, DSPDB flash memory based voicemail system.

Installation can take just a few minutes and connection with the phone system is automatic. Just on, PC program and one PC cable can handle programming of the phone system and voicemail.

The new Intramail builds on NEC Infrontia's base of experience with voicemail systems to offer a sophisticated yet easy to use feature set that enhances ease of use in its voicemail predecessors.

Intramail brings a new level of speed and simplicity to the features you have come to expect from an NEC voicemail system. The full integration allows intramail to supply interactive voice prompts to key system users. In addition, Interactive 'Soft' key prompts on Display phones help users handle their messages. It will show you the number of messages in your mailbox as soon as you enter your mailbox, and will flash a message-waiting lamp on your phone when you have a new message.

The way you really work..

Intramail's Automated Attendant saves you and your customers time and money. Incoming calls are answered quickly with greeting messages that can be charged depending upon the time of day, or day of the week. Greeting messages can be tailored to provide callers with dialing instructions. The Automated Attendant can automatically answer the telephones system's incoming calls; play an instruction, menu message or dialing options.

Benefits and Features

Busy people will benefit from the host of productivity features of the Intramail. A voicemail that will save you and your business valuable time and money.

Fax detection can save you even more money. Now there is no necessity for a separate line for your fax machine, and if it hears a fax tone, it will automatically transfer the call to the extension where your fax machine is installed.

Have you ever had calls which you can not take notes fast enough, or had the necessity to record important information and conversations so that they can be reviewed at a later day? If the answer is yes, then you would benefit from Conversation Record. Conversation Record lets you record a conversation into your mailbox, and even forward it to another extension.

Live Call Screening allows a display keyset extension user to listen to a voicemail message. As a message is being left in their mailbox it is possible to interrupt and take the call at any point during the message.

The Automated Attendant can provide outside callers with a wide range of routing options, and if the telephone system extension numbers are customised, the Intramail mailbox numbers can

be customised to match.

Busy offices cannot always keep pace. Since the Caller ID number is associated with the voicemail message (if caller ID is supplied by your company) it makes returning calls to people that much easier.

Intramail provides highly advanced automated attendant, voicemail and voice prompts for your telephone system

The 4-port option offers 8 hours voice recording whilst the 8-port option offers 16 hours recording

- *Version 5 software or above required*
- *By installing all the benefits of the Intramail you will replace the features of the DSPDB*
